

Please follow the steps shown on this page
and use the attached double page template guide
to transfer your templates to...

Step 1

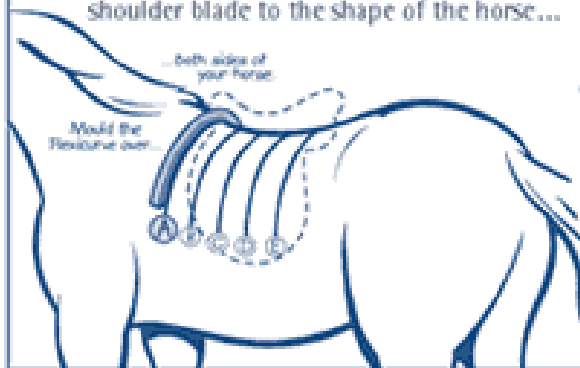

Place your existing saddle on your horse and using a piece of chalk, draw an outline of the saddle on your horses back then remove the saddle.

You can now start taking the templates for the saddle.

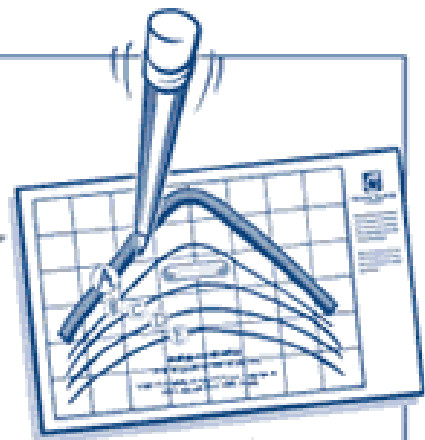

Step 2

Place the centre of the Flexicurve across the spine of the horse where the front of the saddle sits, mould the Flexicurve 1" behind the shoulder blade to the shape of the horse...

CAUTION
DO NOT ADJUST THE FLEXICURVE UNTIL TRACED ONTO THE TEMPLATE SHEET

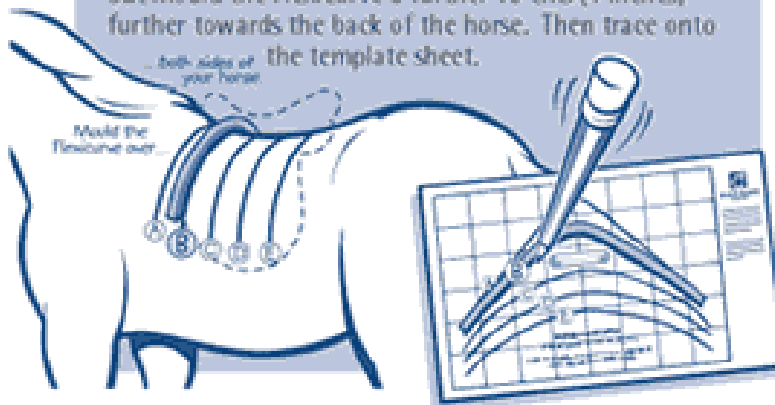

...carefully remove from the horse without altering the Flexicurve and place onto the template sheet and trace around (this is template A).

Step 3

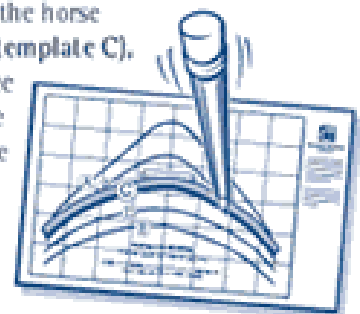

Repeat the same procedure as step 2 for template B, but mould the Flexicurve a further 10 cms (4 inches) further towards the back of the horse. Then trace onto the template sheet.

Step 4

As in the previous step, move the Flexicurve a further 10 cms towards the back of the horse (this is template C).

and trace onto the template sheet.

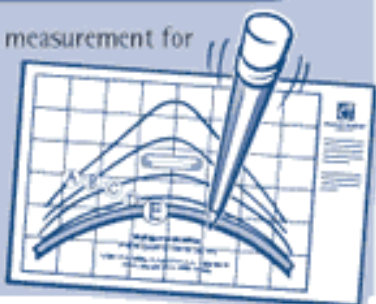

Step 5

Repeat again, moving a further 10cms further towards the back of the horse and again, trace onto the template sheet (this is template D).

Step 6

And now, the last measurement for across the spine (template E). Repeat as the previous 4 templates and trace onto the template sheet.

We now move onto taking the templates for the **side panels** and **spine** of your horse...

Step 7

Profiles F and G run down the centre of each panel. These lines can be achieved accurately by marking a chalk line

down the centre of each panel on the underside of your existing saddle, using a piece of chalk and a ruler.

Next, place the saddle on the horses back, when you remove the saddle the chalk lines should be visible on the horses back, approximately 3-4" down from the spine

Step 9

... place the Flexicurve on one line at a time and mould to the shape of the horse. (Template F is the horses near-side and G is the off-side).

Step 8

Then, place your existing saddle on your horse...

Step 10

Now transfer each template to the template sheet, making sure to mark down which part of the template relates to the front and back of your horse.

Step 11

Mould the Flexicurve along the spine of your horse

The final template to be taken is for the spine of the horse.

The best way to do this is to place the Flexicurve along the horses spine, putting one end at the point where Template A was taken, and moulding along the spine until the point where Template E was taken.

Now transfer to the template sheet, noting down which end template A and E relate to.

And That's Almost It!...

Please return all the templates (A-H) and make sure you have completed all sections in the boxes below.
